

Escalator and travelator cleaning

The World's population is on the rise; cities are becoming denser and land more expensive. Developments are now being built upwards and more escalators are being installed. **Galia Sprules** reviews the cleaning solution from **Rosemor**

As more escalators are being installed so the requirement to clean these is also on the rise with owners and end users demands and standards increasing. Rosemor International has worked in this market for the last 16 years, manufacturing automatic escalator and travelator deep cleaning machines. Supplying their equipment worldwide has enabled their team to adapt and develop the machines to suit different escalator manufacturer's requirements, health and safety and government legislations, languages, abilities and cultures.

Rosemor has been working with their customers to develop the best possible solution to escalator and travelator cleaning. Dealing directly with British customer's nationwide, worldwide dealers and end users, they have adapted the Rotomac and Rotofast to create the most innovative product range, ensuring they continue to be the global leader for escalator and travelator cleaning.

The Rotomac ET15B now contains 15 rotating brushes consisting of 4 different lengths and materials to scrub and sweep dirt into the machine and from the steps.

The brushes have now been used for 15 years and are approved by escalator manufacturers as the most effective and safe way to clean the step without damaging the treads.

The new illuminated, stainless steel control panel is built to sustain substantial usage and common misuse.

The machine is mains powered, however now has a new built in battery-backup system; so customers in an emergency situation (e.g loss of mains power) are able to safely remove the machine from the steps.

The new socket included enables the attachment, the T10, to be connected to perform quick maintenance cleans or travelator cleaning. Therefore customers can purchase a complete system together or separately to ensure every problem is solved quickly.

The T10 attachment has been developed to plug into the Rotomac and clean as the escalator or travelator is moving, for a quick, maintenance clean of the horizontal part of the step. Some customers use this on escalators in busy

airport terminals or shopping centres to clean up spillages thus avoiding disruption during peak hours. Others purchase this, as the sites contain escalators and

travelators and they need a complete cleaning solution for both. The previous machine Rosemor offered was often seen as expensive, too large and over engineered. This small

machine operates using the Rotomac's power and tanks which offers savings on both storage space and cost.

The T10i was developed for customers that did not want to clean escalators and just needed a horizontal tread cleaning solution.

Also ideal for airports where there are so many travelators in use that an extra machine is needed to deal with their busy cleaning schedules.

Easily transported on the trolley this machine consists of the T10, which is used with the Rotomac, if the customer has a Rotomac; they now have all 3 machine options. The complete solution to all escalator and travelator cleaning.

Rosemor's focus on health and safety, supporting customers' requirements and moving with business needs has ensured their great reputation and given them

'World Leader' status.

Rosemor guarantees a personalised service whereby you will get to know each member of staff personally and they will adapt to each customer's needs no matter what the language or culture barriers.

Response times are second to none ensuring minimum costs and time wastage.

For any machine supplied, Rosemor offers full operational and maintenance training on the customers own premises.

Training covers operational, technical
